1 Preface

1.1 About the Interoperability Workflow and User Guide

This guide provides information about configuring workflows, explaining enrichments and accessing results.

The interoperability process has been created to ensure business continuity and a connection between re-platformed applications (RE5 +) and applications that are still on the current platform.

When running the mapping process on the re-platformed applications, the output has to be available for further calculations needed in the current platform applications. To achieve this, new standard records are created for each l2 table, which are further exported as files and imported into the current platform ones.

2 About this release

2.1 In scope

In scope for this release is the connection between the COREP re-platformed application and various current platform applications. When running Credit Risk mapping process on the new platform (RE5 or later), the output has to be available for further calculations performed in existing solutions that run on current platforms (RG, RE4). This output is going to be delivered in new tables created in COREP new solution:

1. SR_RM_CRM_CALC corresponding to l2_rm_crm_calc.

2. SR_RM_CREDIT_RISK_OUT corresponding to l2_rm_credit_risk_out.

These tables, fed with data by Credit Risk process, are then exported in CSV file and imported into the solution that requires the information.

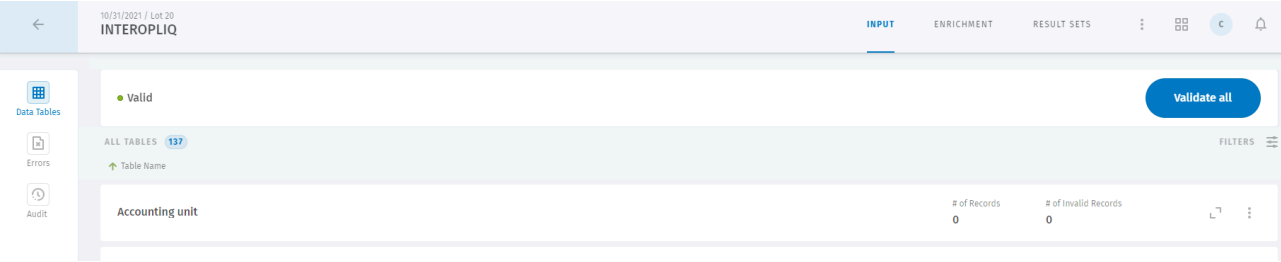
3 Mappings and enhancements

3.1 Run enrichment

Prerequisites

Install the COREP solution distribution package and load the test data following the steps described in the workflow and user guide Library (zoominsoftware.io).

Select the Input tab and click **Validate all** to validate the data set.



Checkpoint:

Starting January 2025, InteropCreditRiskOut process will be disabled by default as it is not needed for daily CRR3 calculations. This process needs to run before Interoperability Enrichment in order to have correct results.

We recommend enabling and running InteropCreditRiskOut process only on demand, rather than during every risk enrichment process. Below are the steps to enable it.

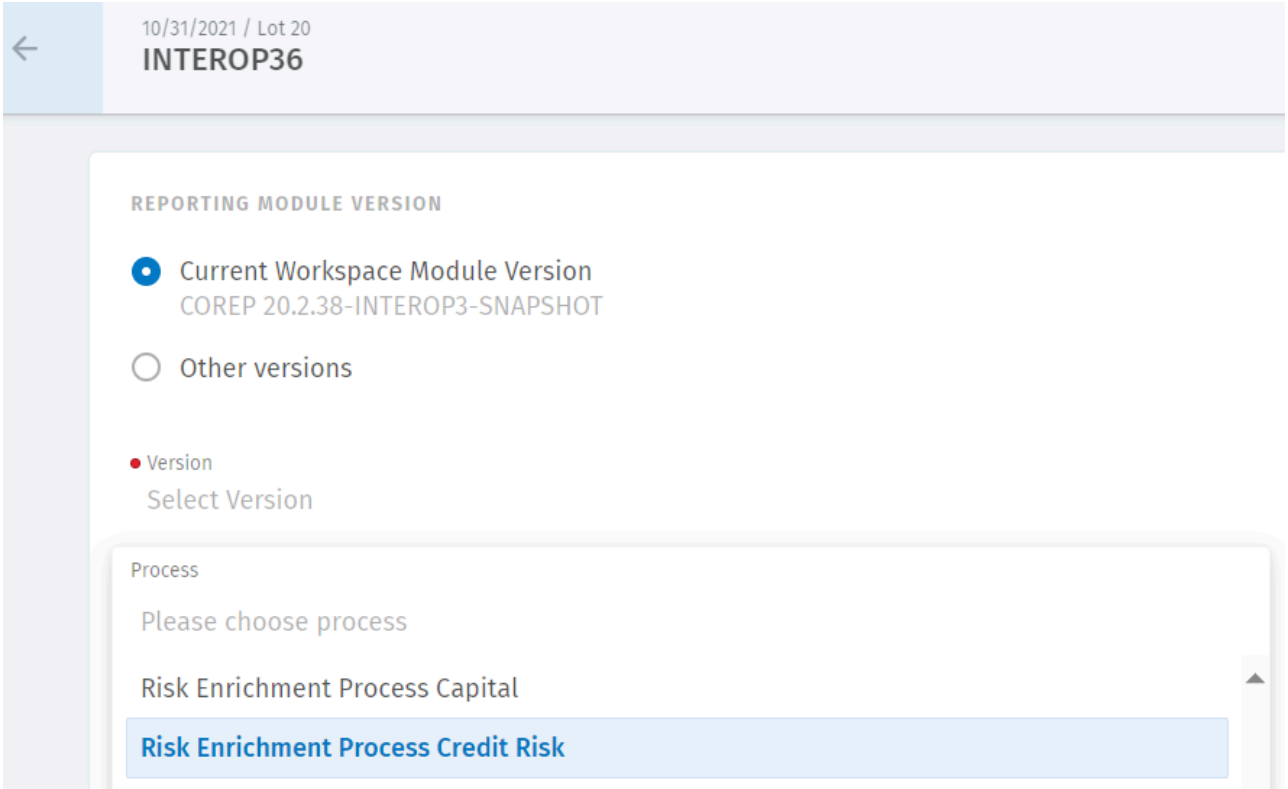
After loading the models in the Risk engine, make the following changes in the engine right before running the risk enrichment:

- Go in the Risk UI to Processing >Additional analysis >Regulatory analytics.
- Select "RA" in the left pane (this is the CR solve).
- Go into the box "Selected analyses" and click on plus and fill in following details:
  - Ranking = 15
  - Solve name = InteropCreditRisk
  - Static analysis = InteropCreditRisk
  - Result save mode = Only in database (default)
  - Click OK
- Click Save

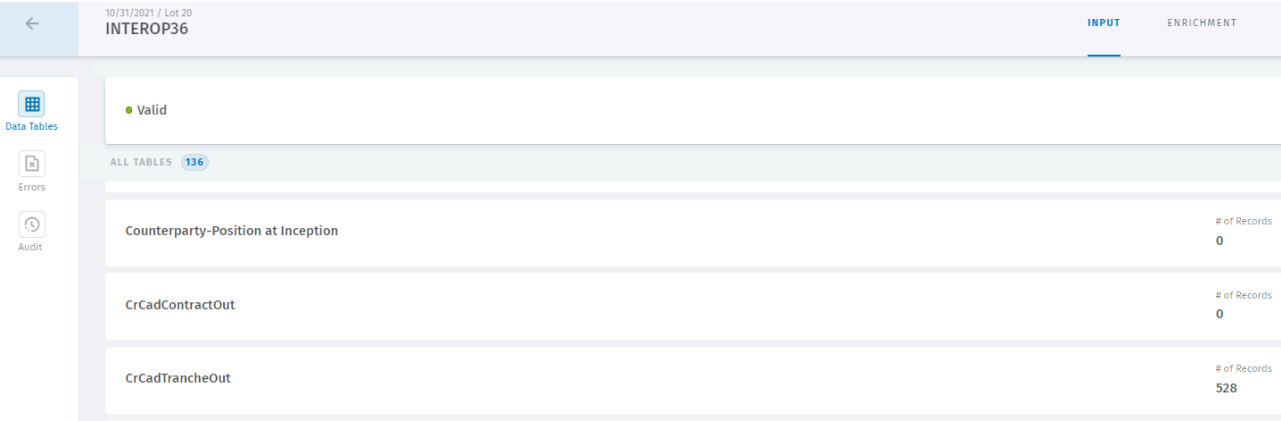
3.1.1 CRR calculation

Select the enrichment tab and run **Risk Enrichment Process Credit Risk**.

The process is only accessible once the data set has been validated.



On the Input tab, the **CrCadTrancheOut**, **CrCadContractOut**, and **InteropCreditRiskOut** tables become visible among the Input L2 tables.



If field *TYP_LE_EXEMPT* is needed, then you must also run **Risk Enrichment process Large Exposures.** As a result, entity **LargeExposuresTrancheOut** is persisted and populated**.**

Note:

Another option to populate the input tables of the interoperability process is to directly import data into the table from a CSV file by opening the table and using the **Import** option.

More information on how to import data from CSV files into risk-out tables is available in the RE manual, topic Importing input data through CSV file.

Warning:

Whether import or manual manipulation of data is performed on the Risk Out entities, you must comply with the following convention to build the record keys:

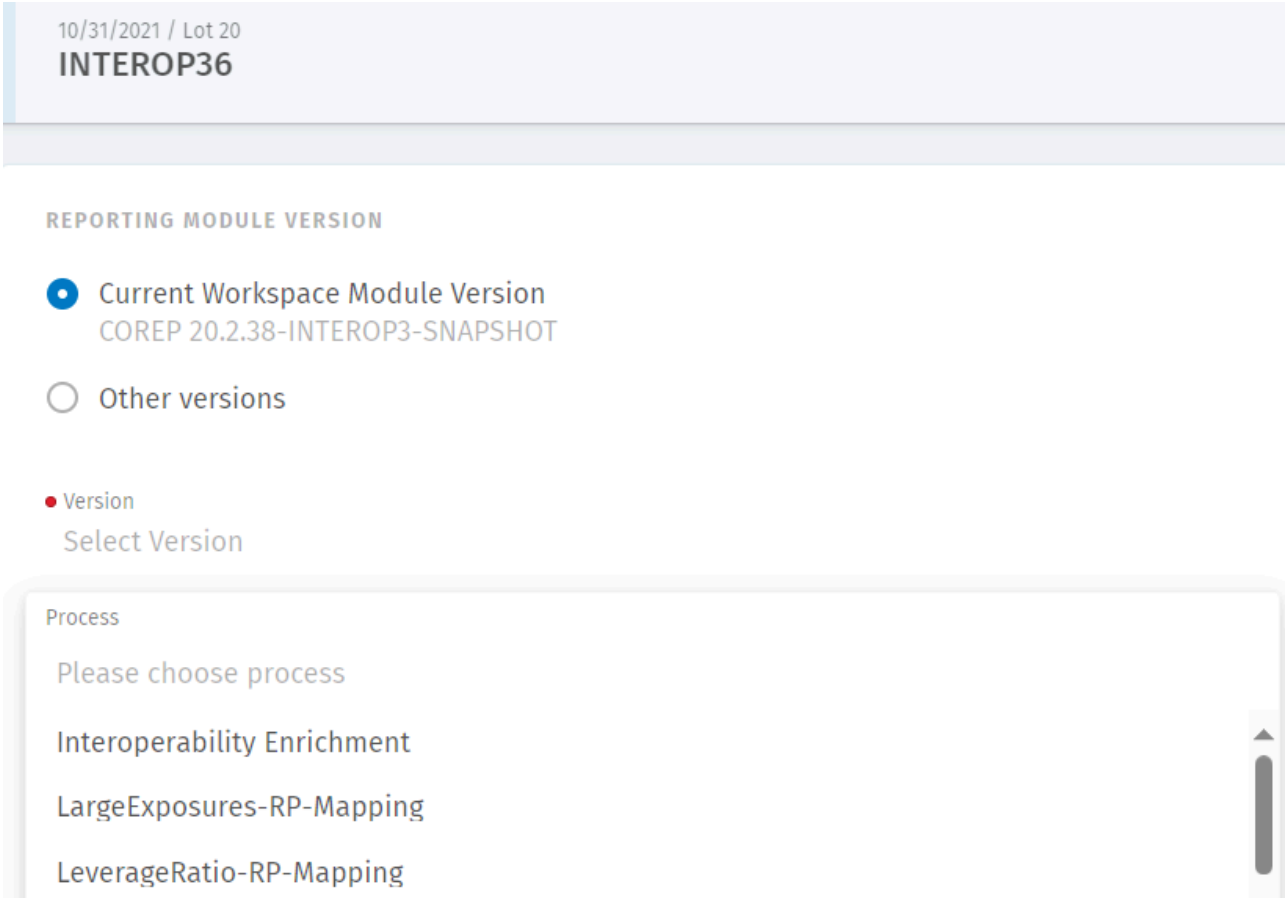
`IDE_POSITION_REF + "|" + IDE_POSITION_TYPE` (for example, BOND|4)

where IDE_POSITION_REF and IDE_POSITION_TYPE are the the fields from Data Foundation interface.

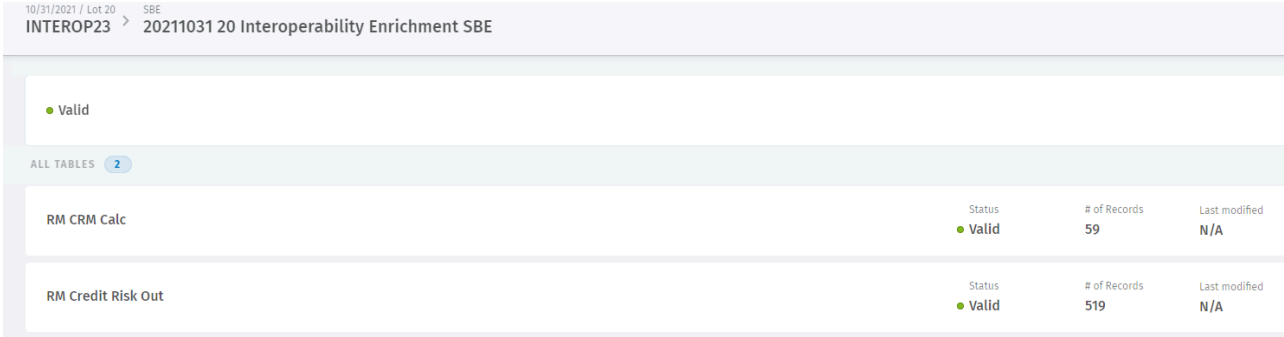
Otherwise, the Interoperability process will fail while trying to de-construct this concatenated key back into IDE_POSITION_REF and IDE_POSITION_TYPE.

3.1.2 Interoperability

Run the **Interoperability Enrichment** process.

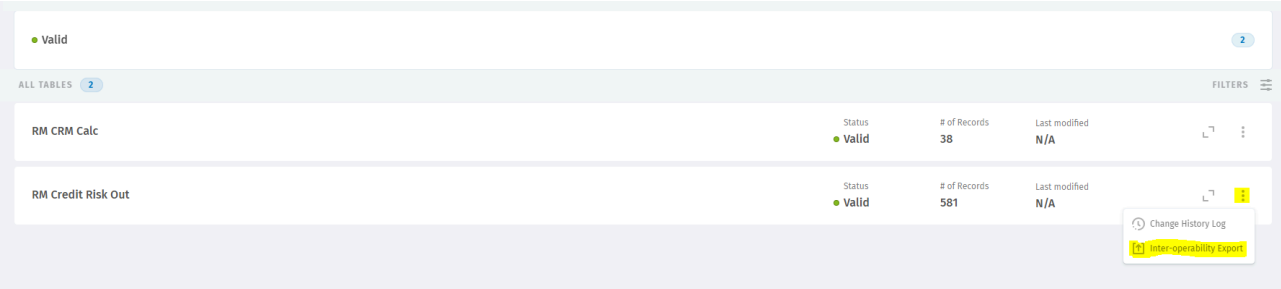


If your input tables, **crCadTrancheOut** , **cdCadContractOut**, and **InteropCreditRiskOut** contain data and the enrichment process has run successfully, new standard records will be generated, which you can view in the Result Sets section.

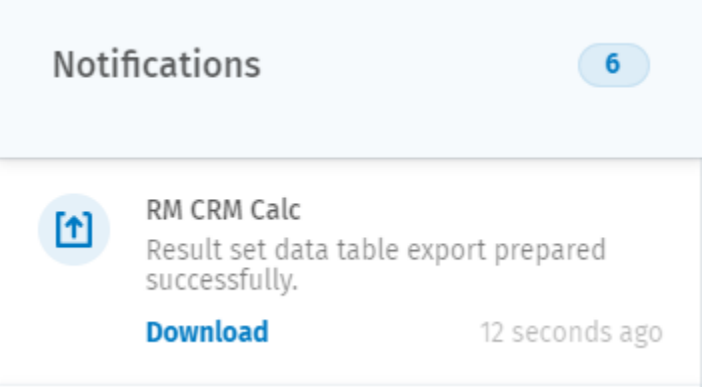


3.2 Export

You can see the data when you open the result set and you can export the resulted table as a CSV file by using option **Inter-operability Export** from the menu.



When the file is ready for downloading, you will get a notification in the upper-right corner.



The information is available in the CSV files and is ready to be loaded or imported into the current platform applications.

Note:
The process is under development and as new features are added, more solutions will use it.

3.3 Import

Tip:
In order to help you with the steps described in this workflow we have created a video that you can access by following this link: OneSumX Interoperability Info session

Once the CSV file is saved locally, you can further import the exported files into the GDM schema (L2 tables) of your existing platform (OneSumX Regulatory Reporting RP Web Client (RG TNG) or Regulatory Engine 4).

For further processing to import into GDM schema several options exist:

1. Regular ETL tools, or standard import functionalities of MS SQL Server or ORACLE tools (SQL Server Integration Services, ORACLE SQLDeveloper, SQL*Loader, etc.). This options is available for all our Reporting Engines but if you are using OneSumX Regulatory Reporting RP Web Client (RG TNG) or Regulatory Engine 4 the import from the User Interface is also available.

   Warning:
   This works if the user can access the database with the above-mentioned tools or a batch process is accessible for the user.

2. User Interface for OneSumX Regulatory Reporting RP Web Client (RG TNG) or Regulatory Engine 4. This can be accessed from the import button available in the interface. In this case we have 3 known issues that can arise and which we will fix in the near future:

   a. For Oracle users, case sensitive header for CSV imported files.

      - **Workaround**: The CSV must be modified and the header has to be set in upper case.

   b. Possible „Invalid CSV File" error caused by presence of quotes.

      - **Workaround**: Open the CSV in Excel application and save the file to remove the double quotes or in a text editor and remove all double quotes.

   c. Error when the header of the CSV has physical name and user interface has both logical and physical name.

      - **Workaround**: In OneSumX Regulatory Reporting RP Web Client (RG TNG) or Regulatory Engine 4 please go to Reporting Hub ->Configuration->User Tables->LDM General settings (BRS_INI) table and set the parameter ShowLogicalNames to 0. Possible values for this parameter are:

        - 0 – Show physical names

        - 1 – Show logical names

   d. When uploading the file in GDM via UI in some cases a constraint error can appear

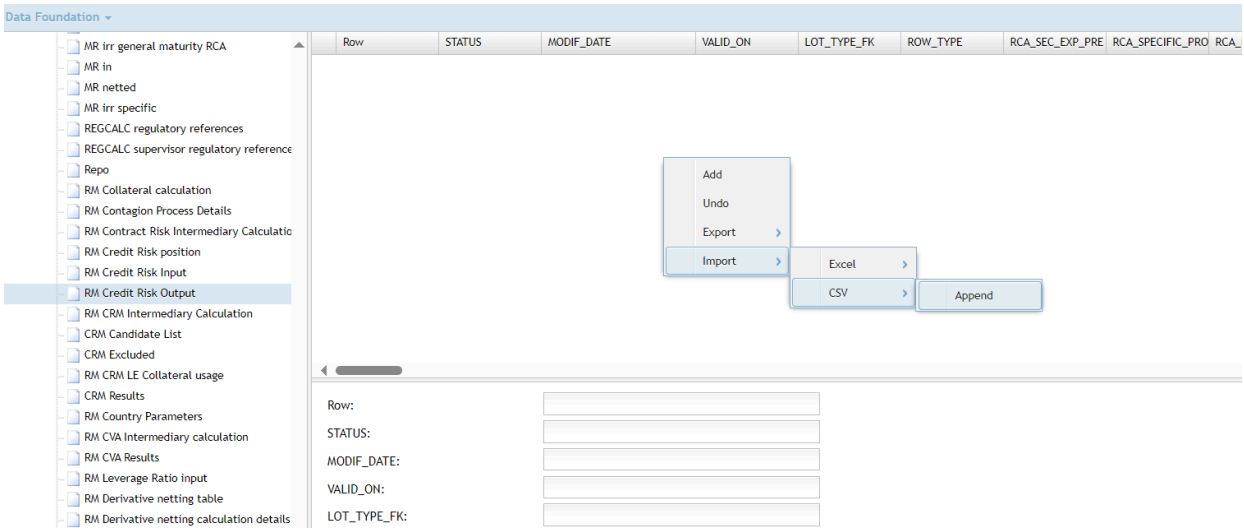
      - **Workaround:** In the Database, manually change the sequence in order to align it with max row_id.

Steps to import:

1. Navigate in TNG/RE4 UI to Data → Data Foundation

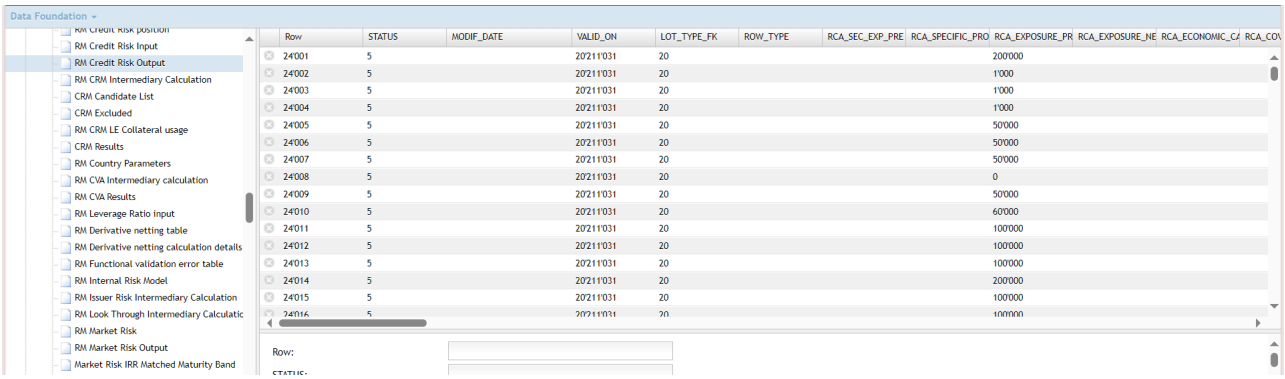
2. Open the global data unit and navigate to the specific table that you want to import(the result of Interoperability).

3. Right-click on the screen, select Import → CSV → Append



4. Select the CSV (Inter-operability Export from RE6) to be imported and click **Import**.

5. If the import is successful, data should be visible in the UI.



4 Allocations

Further information will be added when the functionality is ready to be used.

4.1 Interoperability reports and rows name

Since the CORE 13.11.0 release, the Interoperability reports are available.

Corep_OF_DPM400_Summary	
Row name	**Row description**
C_01.00_r0010_c0010	**Own Funds**

Corep_OF_DPM400_Summary	
Row name	**Row description**
C_02.00_r0050_c0010	Standardised Approach (SA)
C_02.00_r0250_c0010	IRB approaches when neither own estimates of LGD nor Conversion Factors are used
C_02.00_r0310_c0010	IRB approaches when own estimates of LGD and/or Conversion Factors are used
C_02.00_r0520_c0010	Total Risk Exposure Amount for position, foreign exchange and commodities risks
C_02.00_r0540_c0010	Traded debt instruments
C_02.00_r0550_c0010	Equity
C_02.00_r0555_c0010	Particular approach for position risk in CIUs
C_02.00_r0580_c0010	Risk exposure amount for Position, foreign exchange and commodities risks under internal models (IM)
C_02.00_r0590_c0010	Total Risk Exposure Amount for operational risk (OpR)
C_03.00_r0130_c0010	Total SREP capital requirement ratio (TSCR)
C_03.00_r0140_c0010	TSCR: to be made up of CET1 capital
C_03.00_r0150_c0010	TSCR: to be made up of Tier 1
C_03.00_r0160_c0010	Overall capital requirement ratio (OCR)
C_03.00_r0170_c0010	OCR: to be made up of CET1 capital
C_03.00_r0180_c0010	OCR: to be made up of Tier 1
C_03.00_r0190_c0010	OCR and Pillar 2 Guidance (P2G)
C_03.00_r0200_c0010	OCR and P2G: to be made up of CET1 capital

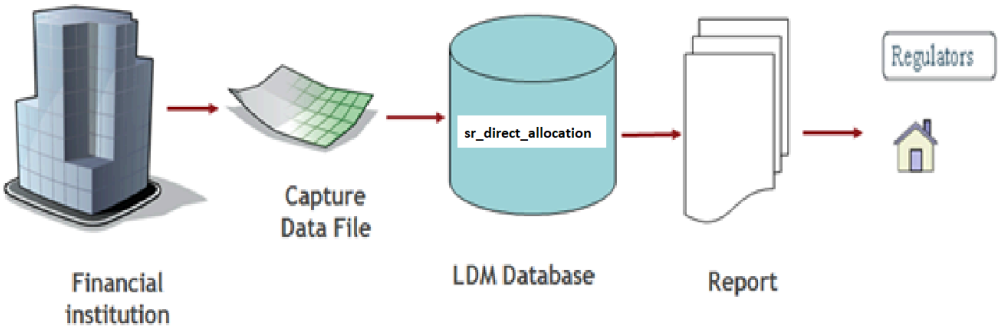
Corep_OF_DPM400_Summary	
Row name	**Row description**
C_03.00_r0210_c0010	OCR and P2G: to be made up of Tier 1 capital
C_03.00_r0220_c0010	Surplus(+)/Deficit(-) of CET1 capital considering the requirements of Article 92 of Regulation (EU) No 575/2013 and Article 104a of Directive 2013/36/EU
C_04.00_r0740_c0010	Combined Buffer Requirement
C_04.00_r0750_c0010	Capital conservation buffer
C_04.00_r0760_c0010	Conservation buffer due to macro-prudential or systemic risk identified at the level of a Member State
C_04.00_r0770_c0010	Institution specific countercyclical capital buffer
C_04.00_r0780_c0010	Systemic risk buffer
C_04.00_r0800_c0010	Global Systemically Important Institution buffer
C_04.00_r0810_c0010	Other Systemically Important Institution buffer
C_05.01_r0010_c0040	Total Adjustments - Adjustments included in RWAs
C_08.01_r0010_c0110.Adv_Total	Total Exposures - Exposure Value
C_08.01_r0010_c0110.Fun_Total	Total Exposures - Exposure Value
C_08.01_r0010_c0280.Adv_Total	Total Exposures - Memorandum Items: Expected loss amount
C_08.01_r0010_c0280.Fun_Total	Total Exposures - Memorandum Items: Expected loss amount
C_08.01_r0010_c0300.Adv_Total	Total Exposures - Memorandum Items: Number of Obligors
C_08.01_r0010_c0300.Fun_Total	Total Exposures - Memorandum Items: Number of Obligors

Corep_LR_DPM400_Summary	
Row name	**Row description**
C_40.00.b_r0095_c0070	Off-balance sheet items - Notional amount / nominal value
C_47.00_r0061_c0010	Derivatives: replacement cost under the SA-CCR (without the effect of collateral on NICA)
C_47.00_r0071_c0010	(-) Effect of the eligible cash variation margin received offset against derivatives market value (SA-CCR - replacement cost)
C_47.00_r0081_c0010	(-) Effect of the exempted CCP leg of client-cleared trade exposures (SA-CCR - replacement cost)
C_47.00_r0091_c0010	Derivatives: Potential future exposure contribution under SA-CCR (multiplier at 1)
C_47.00_r0102_c0010	(-) Effect of exempted CCP leg of client-cleared trade exposures (simplified standardised approach -replacement costs)
C_47.00_r0110_c0010	Derogation for derivatives: original exposure method
C_47.00_r0120_c0010	(-) Exempted CCP leg of client-cleared trade exposures (original exposure method)
C_47.00_r0130_c0010	Capped notional amount of written credit derivatives
C_47.00_r0140_c0010	(-) Eligible purchased credit derivatives offset against written credit derivatives
C_47.00_r0280_c0010	Asset amount deducted (-) or added (+) - Tier 1 capital - transitional definition
C_47.00_r0290_c0010	Total Leverage Ratio exposure measure - using a fully phased-in definition of Tier 1 capital
C_47.00_r0300_c0010	Total Leverage Ratio exposure measure - using a transitional definition of Tier 1 capital
C_47.00_r0340_c0010	Leverage Ratio - using a transitional definition of Tier

Corep_LR_DPM400_Summary	
Row name	**Row description**
	1 capital
C_47.00_r0410_c0010	**Pillar 1 Leverage Ratio requirement**

4.2 Data loading processes

The data will be delivered by the customer in a CSV file format.



It will link data units to the appropriate entry in Financial_inst table based on the legal entity data delivered in the input file. Similarly, the data unit reporting date will be populated based on reporting date data delivered in the input file.

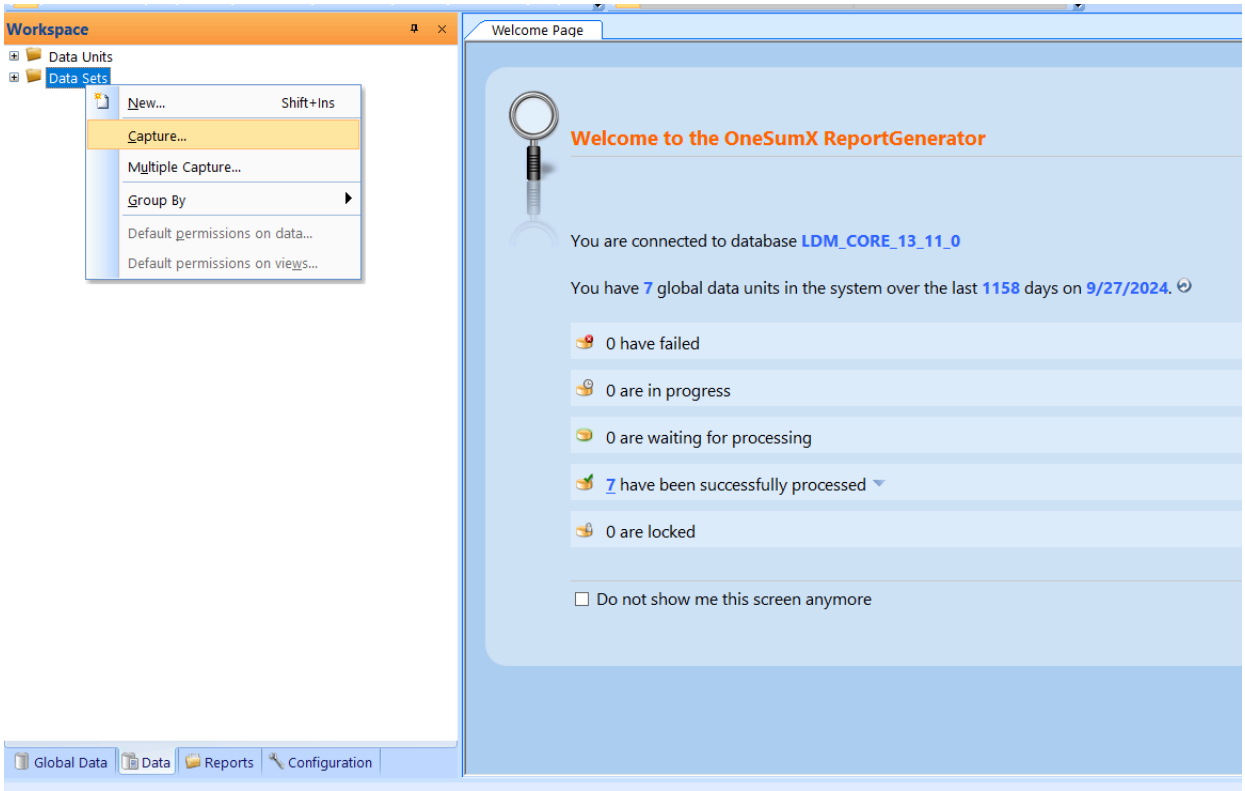
4.2.1 Loading data

Context

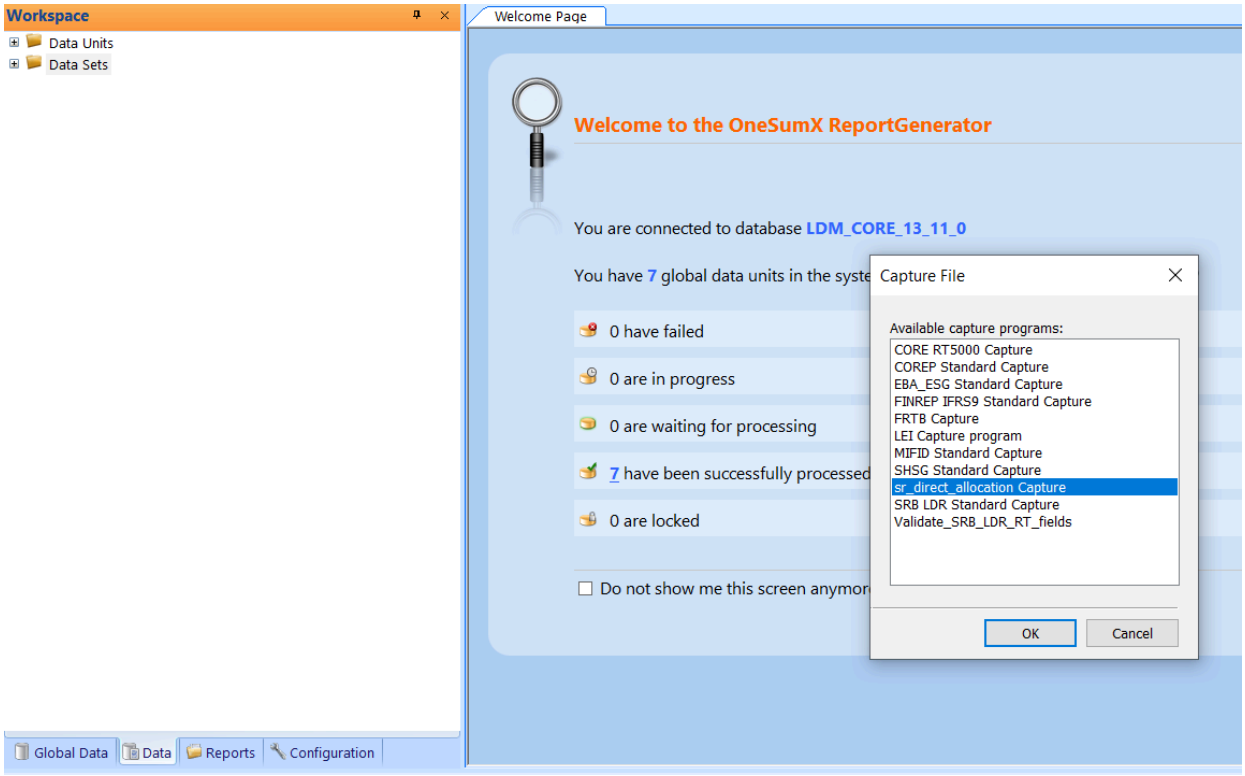
This above process will create required Data set/Data unit and load the data in sr_direct_allocation and data loaded though capture file into sr_direct_allocation table which is then used to allocate reports.

Procedure

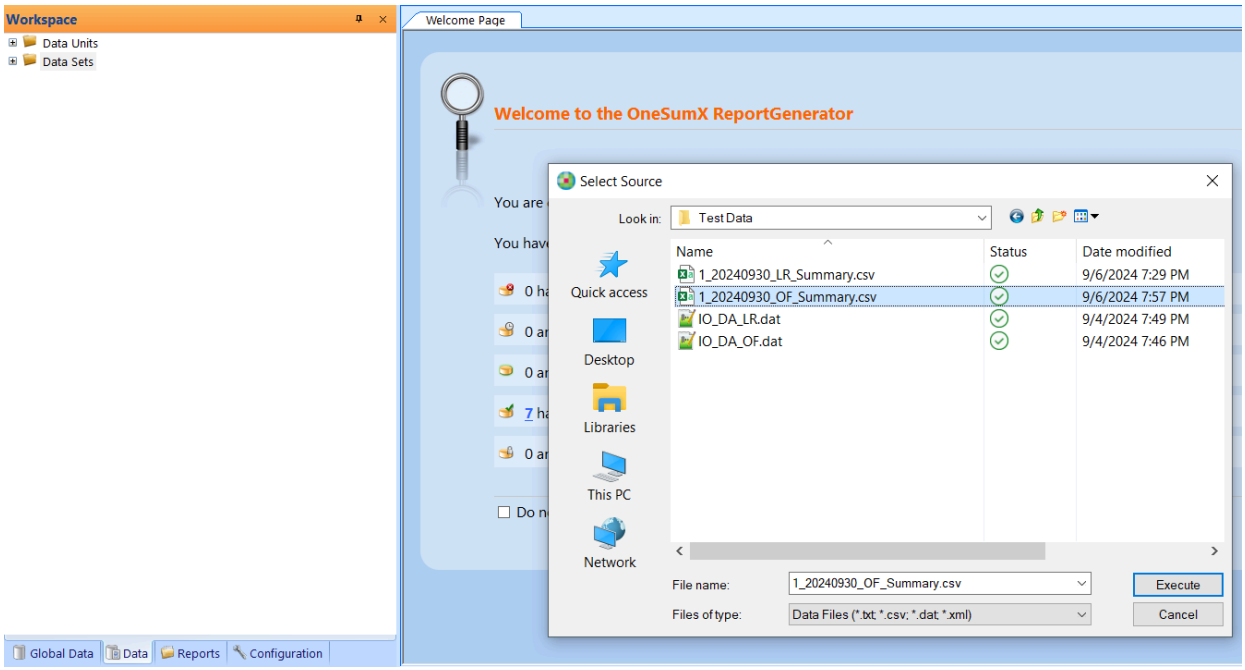
1. In the platform in the data window right click **Data Sets** and select **Capture**.



2. Select the **sr_direct_allocation Capture** process.



3. Select the file to be captured and execute the process.



Results

It populates **sr_direct_allocation** and creates a data set and one or more data units ready to be allocated to the required returns.

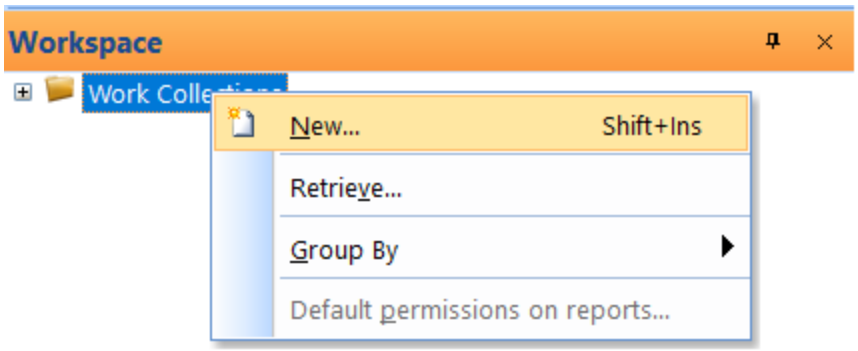
4.2.2 Creating the interoperability Work Collections

Context

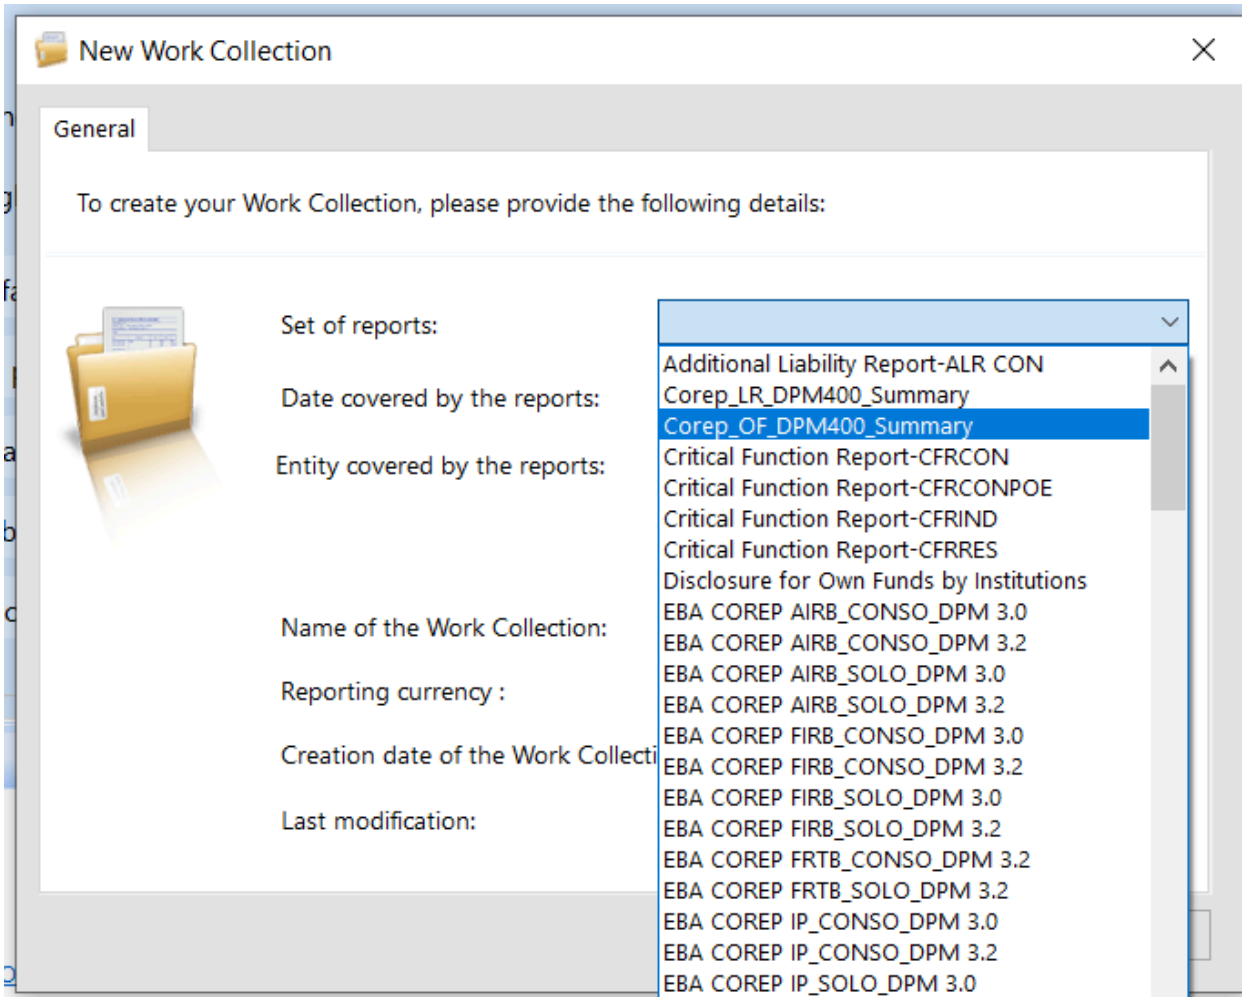
After the data is loaded you need to create the **Work Collections** for interoperability.

Procedure

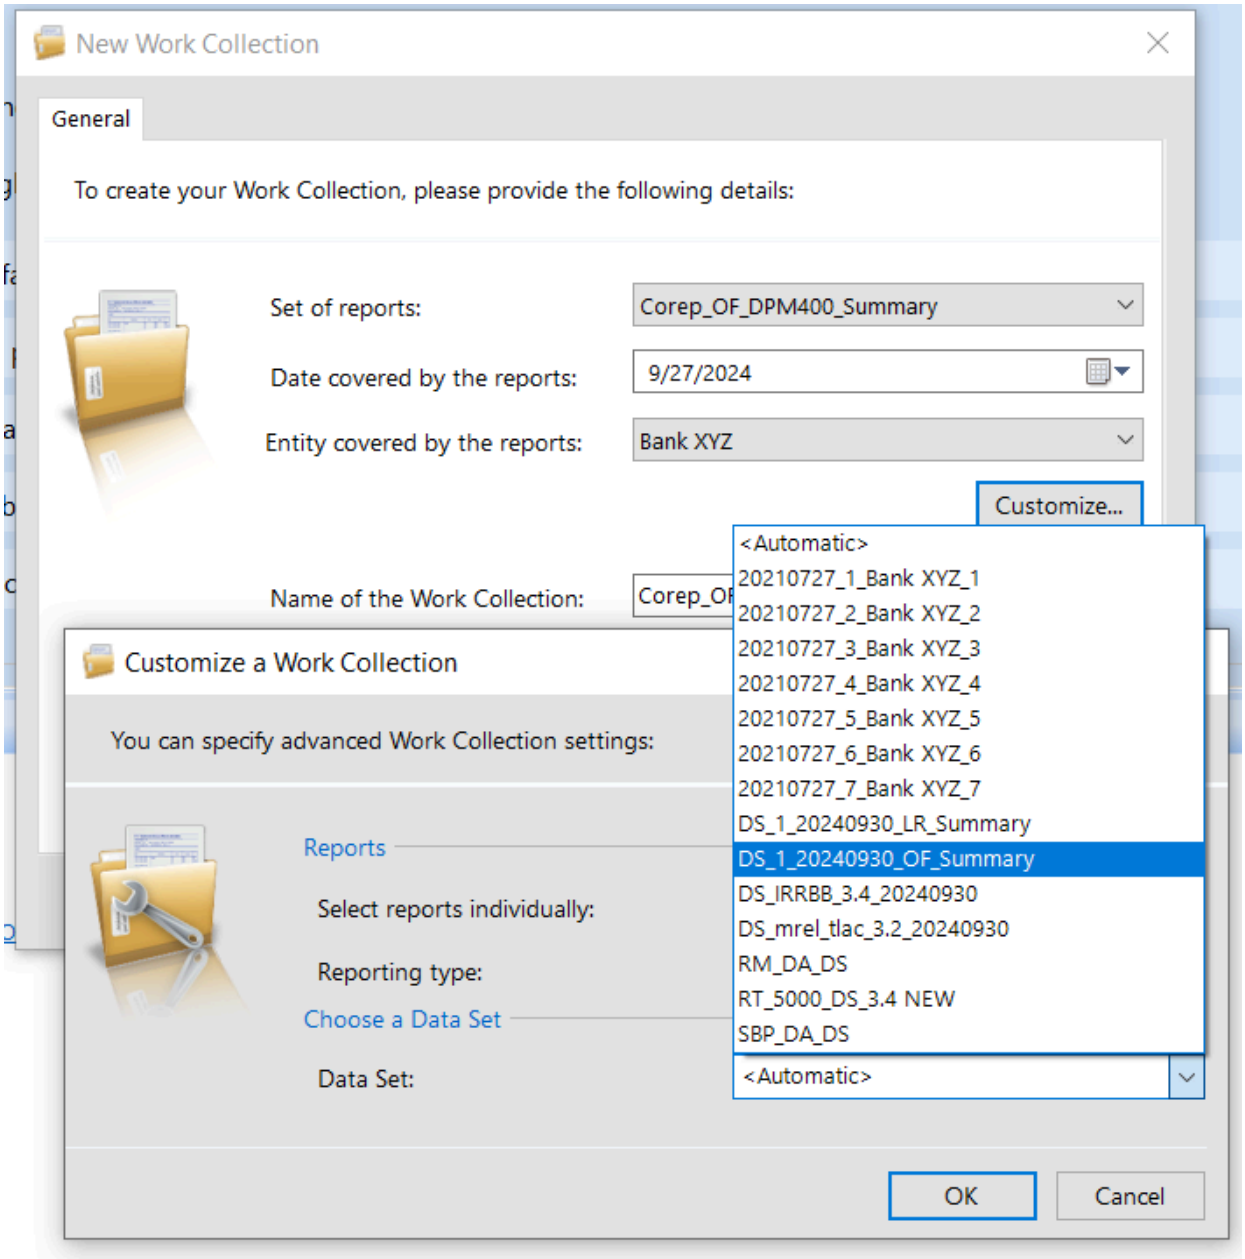
1. In the platform in the reports window right click on **Work Collections** and select **New**.



2. In the **New Work Collection** popup select the interoperability **Work Collection** that you want to create.



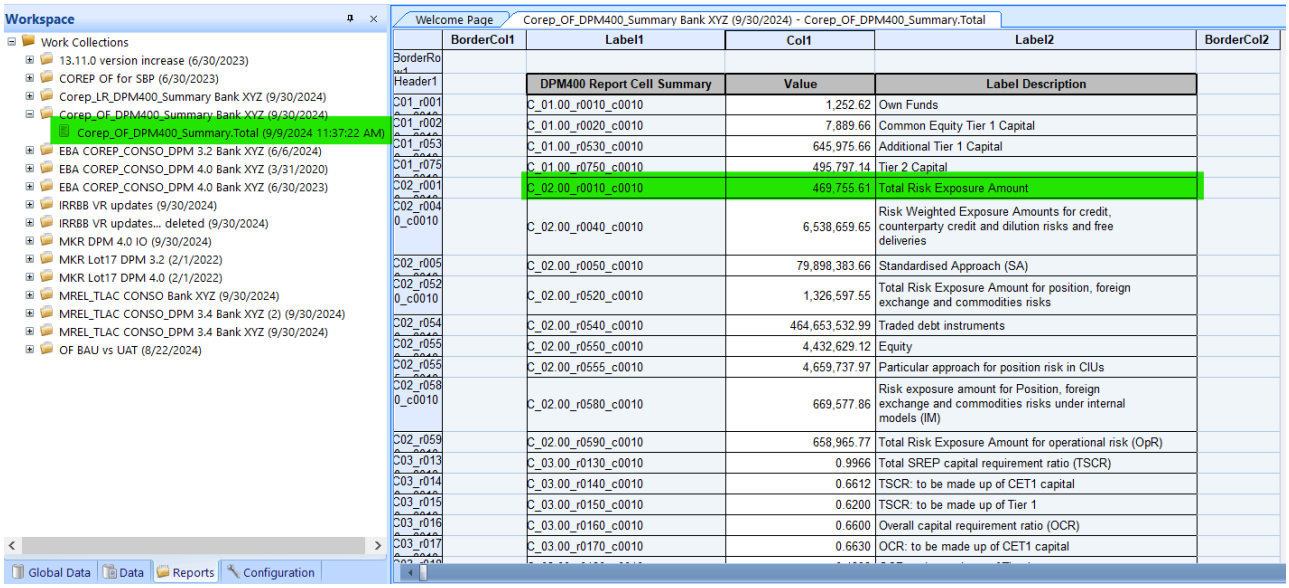
3. Click **Customize** and select the data set to allocate the **Work Collection**.



4. Right-click on the new **Work Collection** and allocate the report.

Results

Once the process is finished you can open the report and check the allocated values.



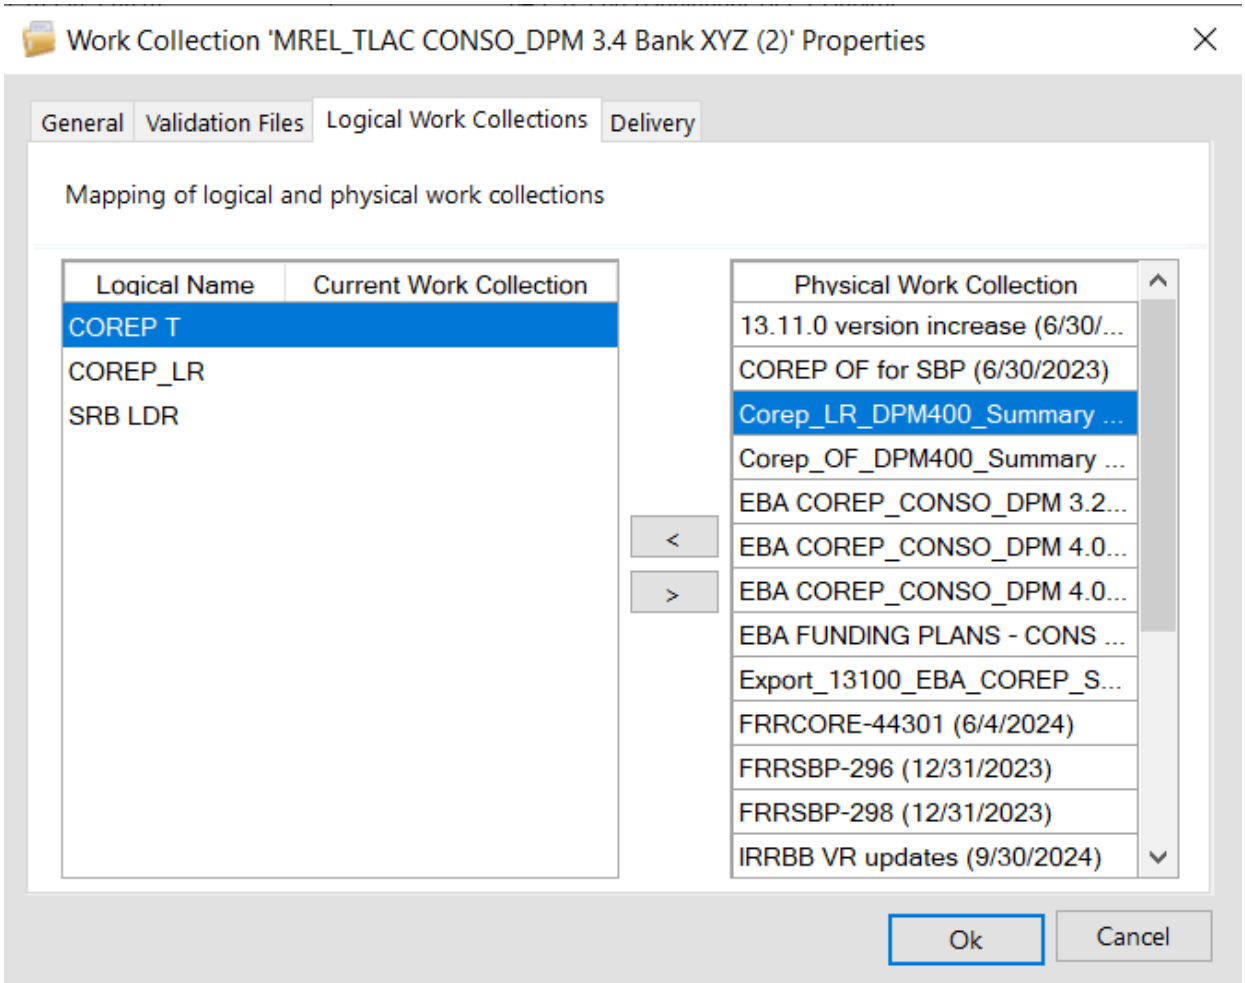
4.2.3 Linking the interoperability Work Collection

Context

The following steps shows you how to link the interoperability **Work Collection** to the reporting module.

Procedure

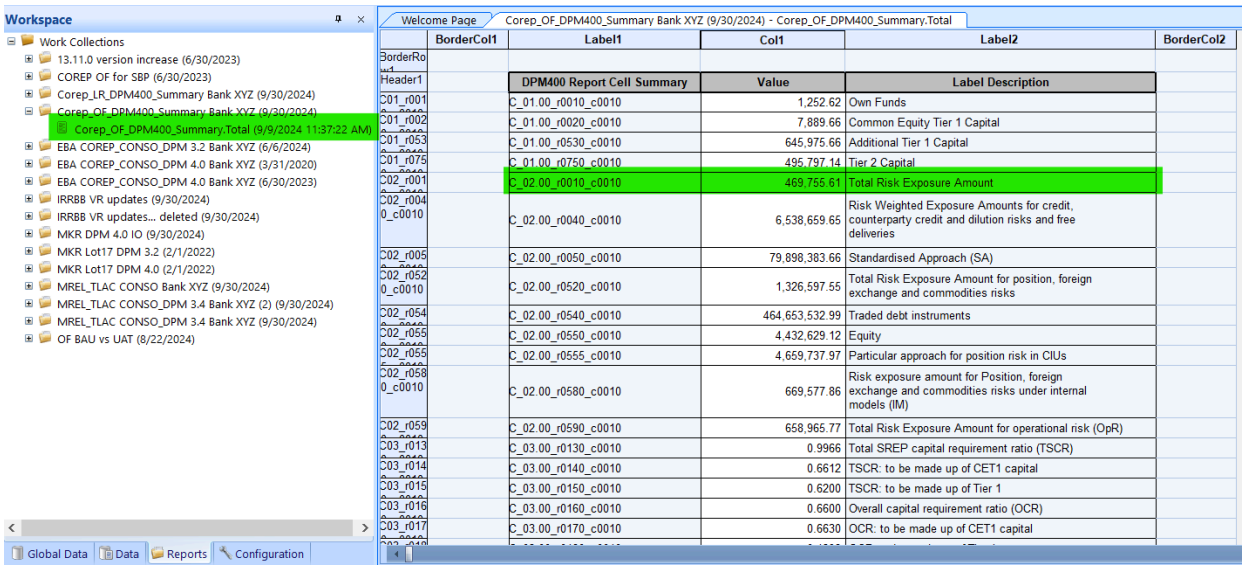
1. Create the **Work Collection** for the module that you need to report (follow the steps in **Creating the interoperability Work Collections**).
2. To link the interoperability **Work Collection** to the reported one, select from the list the matching **Work Collection** and select the left arrow.



3. Allocate the reported **Work Collection**.

Results

The data from the interoperability reports is now in the reported modules.



5 Validations

Further information will be added when the functionality is ready to be used.

6 Contact

- For questions or issues related to the product or solution, raise a support ticket through our FRR Community.
- For questions about your support ticket or to subscribe additional email addresses to release notifications, email FRR-Support@wolterskluwer.com.
- To request support for implementation from our Professional Services team or to request a training session, contact your account manager or sales representative from Wolters Kluwer.
